Revision 3eb633b1 - 2008-04-21 18:45 - Hamish Coleman

Add telnet processing to serial-data-pump. Add ability to exit back to menu. There is still a lot of cleanup work remaining from here. We do not need the menu thread, we should run the menu from the net_to_com thread, however it appears to meet the requirements. closes #16, #20

History

#1 - 2008-04-20 23:35 - Hamish

- % Done changed from 0 to 20

This is due to the telnet end of line processing - Telnet specifies that end of line will either be CR LF or CR NUL, thus what we are seeing here appears to be the NUL character being interpreted by the serial device.

#2 - 2008-04-20 23:49 - Hamish

- Assignee set to Hamish

#3 - 2008-04-20 23:50 - Hamish

- Due date set to 2008-04-30

#4 - 2008-04-20 23:52 - Hamish

Implementing this will require a cooked data processing mode - thus allowing telnet option processing in serial-data-pump mode and therefore send break support
